

How To Convert Nozzle GPM To Ounces Per Minute

Take the GPM and multiply it by 128 = Oz. per minute.

Complete Nozzle # ISO Color Code Venturi # / Tip #	Liquid Pressure PSI	Nozzle Capacity GPM
TDXL-11002	15	0.12
(Complete Nozzle #)	20	0.14
Yellow	30	0.17
	40	0.20
TDXLV – 02	50	0.22
(Venturi Part #)	60	0.24
Use 04 Tip	80	0.28
	100	0.32
	120	0.35

Example: .20 GPM X 128 = 25.6 oz. per minute

How To Calculate Ground Speed

- Pick a speed at which you normally spray
- Check to see how many minutes it takes to drive a mile going that speed.
- Take that time and divide it into 60 = MPH
- Example: It takes 7 minutes and 30 seconds to drive a mile.
- Take 60 divided by 7.5 = 8 MPH

How To Convert Nozzle GPM To Ounces Per Minute

Take the GPM and multiply it by 128 = oz. per minute.
